Thesis Plan

Submission

Find the submission link on Blackboard

Due date

The Thesis Plan must be submitted between Weeks 2 and 4 in the second semester (Part B).

Multiple submissions

The assessment is Pass/fail and you can submit multiple times. Submissions will be marked within three days, with feedback provided. Resubmissions are permitted before the due date, and multiple submissions are allowed within the submission window. It is strongly recommended that your initial submission is made well before the final deadline.

Hurdle

You must have submitted a satisfactory Thesis Plan by the final deadline (Friday of week 4) to satisfy the hurdle requirement. To receive a grade of 5 or higher for the Thesis Report, you must complete a satisfactory Thesis Plan. If the Thesis Plan is not completed to a satisfactory standard by the final deadline, the maximum grade achievable for the Thesis Report will be capped at 4.

Administrative details

Student name

Student number

Program enrolment

Course enrolment

Number of units

Expected workload for your enrolment (hours per week)

Supervision details

Primary Supervisor

Other Supervisors (optional)

Have you met your supervisor this semester (yes/no, online/in person)?

Do you have a regular meeting scheduled for this semester (weekly/biweekly/other (please specify))?

Thesis plan (thesis draft)

The Thesis Plan is an initial version of the final Thesis structure. Use the Word template or Latex template provided. Marking criteria focuses on appropriately filled in front matter, a contents page with section/chapter names, statement of AI use, and reuse of material from project proposal where possible. All background and related material should be appropriately referenced and appear in a bibliography/reference list.

It is normal for the thesis draft to vary from the submitted project proposal. Your final thesis may be different from your submitted draft thesis.

It is not considered plagiarism to use material from your previously submitted thesis works (including identical sentences). However, you should update it to describe what was actually achieved (not what was planned at the start of the project).

Use of AI Statement

Read and acknowledge the Use of AI Statement, describe the specific ways that you used AI in the assessment and fill in the AI table. Keep a record of this information over the year as you will need to update it for your proposal and final thesis report.

I acknowledge the use of generative AI tools in completing this assessment. Details of which tools were used and how they were used are provided in the table below, along with appropriate in-text and full references. I take responsibility for critically evaluating and integrating the AI-generated content, and ensuring it adheres to academic integrity standards.

Have you used AI in your project

- To explore your topic? Yes/No. Explain how (or explain why not).

- To define your research question? Explain how (or explain why not).
- To assist with your literature review? Explain how (or explain why not).
- To assist with formatting the thesis outline presented here (e.g. grammar, spelling, language)? Explain how (or explain why not).
- Did you generate figures using AI? Explain how (or explain why not).
- Did you analyse data using AI? Explain how (or explain why not).
- Did you generate data using AI? Explain how (or explain why not).
- Did you generate text for your thesis using AI? Explain how (or explain why not).
- For other aspects of your work? Explain how you used it. (e.g., Did you use generative AI to write your application for ethics approval?)

Fill in the table in the AI Use section below.

Prof Michael Bruenig
Head of School
School of Electrical Engineering and Computer Science
The University of Queensland
St Lucia, Q 4072

Dear Professor Bruenig,

In accordance with the requirements of the Degree of {Bachelor of Engineering (Honours)} in the School of Electrical Engineering and Computer Science, I submit the following thesis entitled "{Title of thesis}" The thesis was performed under the supervision of {Supervisor's Title and Full Name}. I declare that the work submitted in the thesis is my own, except as acknowledged in the text and footnotes, and that it has not previously been submitted for a degree at the University of Queensland or any other institution.

Yours sincerely,

{Author's Signature}

{AUTHOR'S NAME.}

Declaration by Author

This thesis is composed of my original work, and contains no material previously published, written by another person, or generated by artificial intelligence (AI), except where clearly referenced and acknowledged either in the main text or the preliminary pages of this thesis. I have clearly stated the contribution of others to jointly authored works that I have included in my thesis.

I have clearly stated the contribution of others to my thesis as a whole, including statistical assistance, survey design, data analysis, significant technical procedures, professional editorial advice, use of AI tools, financial support, and any other original research work used or reported in my thesis. The content of my thesis is the result of work I have carried out since the commencement of my enrollment in the course code indicated on the title page, and does not include a substantial part of work that has been submitted to qualify for the award of any other degree or diploma in any university or other tertiary institution. I have clearly stated which parts of my thesis, if any, have been submitted to qualify for another award.

I acknowledge that copyright of all material contained in my thesis resides with the copyright holder(s) of that material. Where appropriate I have obtained copyright permission from the copyright holder to reproduce material in this thesis and have sought permission from co-authors for any jointly authored works included in the thesis.

Use of AI Statement

I acknowledge the use of generative AI tools in completing this assignment. Details of which tools were used and how they were used are provided in the table below, along with appropriate in-text and full references. I take responsibility for critically evaluating and integrating the AI-generated content, and ensuring it adheres to academic integrity standards.

AI Model and date	Artificial Intelligence (AI) tool usage (tick all that apply)											
	Language Translation	Grammer/style/spelling	Topic exploration	Research questions	Literature review	Data analysis	Generate data	Generate text	Content Creation visual (formatting)	Content Creation (e.g. code)	Feedback	Other (provide details)
ChatGPT 4o 11/09/24		✓	✓	✓							✓	
Midjourney 11/09/24									✓			

Acknowledgments

Acknowledge your supervisor, preferably with a few short and specific statements about their contribution to the content and direction of the project. If you collaborated with another student, acknowledge your partner's contribution, including any parts of the thesis of which they were the principal author or co-author; this information can be duplicated in footnotes to the chapters or sections to which your partner has contributed. Briefly describe any assistance that you received from technical or administrative staff. Support of family and friends may also be acknowledged but generally sentimentality is avoided or hidden in the dedication.

Abstract

This document is a skeleton thesis for 4th-year students. The printable versions (`skel.dvi, skel.ps, skel.pdf`) show the structure of a typical thesis with some notes on the content and purpose of each part. The notes are meant to be informative but not necessarily illustrative; for example, this paragraph is not really an abstract, because it contains information not found elsewhere in the document. The LaTeX 2_ε source file (`skel.tex`) contains some non-printing comments giving additional information for students who wish to typeset their theses in LaTeX. You can download the source, edit out the unwanted material, insert your own frontmatter and bibliographic entries, and in-line or `\include{}` your own chapter files. Of course the content of a particular thesis will influence the form to a large extent. Hence this document should not be seen as an attempt to force every thesis into the same mold. If in doubt about the structure of your thesis, seek advice from your supervisor.

List of Tables

5.1 *Fraction of air volume involved in heat exchange for second mode (right column) vs. filling factor (left column). The plain-text headings represent f, m, μ_2 and f_2.* 5

Chapter 1

Introduction

The introductory chapter describes the importance of the field and the scope and significance of your project. It usually ends with an overview of the remainder of the thesis.

Notice that Arabic page numbering begins with Chapter 1. Preceding pages (known as "frontmatter") have Roman numbering. The `book` document class in LaTeX follows this numbering convention by default (see Lamport [1], p. 80).

Chapter 2

Literature review / prior art

You will need to review previous work in the field, which may include books and papers ("literature"), patents and commercial products ("prior art"), and earlier work in your Department. This information is usually (but not always) collected in a single chapter, whose title should preferably be more specific and interesting than the one above.

Chapter 3

Theory

A scientific paper is likely to be read by people who are not specialists in the same field as the author(s), but who nevertheless may need to use the results of the paper in their own fields. Similarly, the examiners of your thesis will probably include at least one academic who does not teach or conduct research in the subject area of your thesis. In an early chapter of your thesis, therefore, you should quote any theoretical results which are necessary for the understanding of later chapters. Examiners who are not specialists in your area will know whether you have given sufficient theoretical information. They will also know whether you have insulted their status by presenting material which is familiar to every half-competent graduate in every field of ECE.

Chapter 4

Methodology, procedure, design, etc.

This may be one chapter or several. Again, titles should be more informative than the above.

You will almost certainly need diagrams to clarify your meaning. The LaTeX 2_ε `graphics` package allows the inclusion of PostScript graphics, as in Fig. 4.1. The inclusion of LaTeX `picture` graphics, as in Fig. 4.2, requires no auxiliary packages and allows the mathematical formatting features of LaTeX to be used in diagrams; but the `picture` files, unlike PostScript files, usually require manual editing.

Figure 4.1: Experimental two-way active crossover (op-amp version)

Figure 4.2: Modeling a discrete-time LTI system using z-transforms

Chapter 5

Results and discussion ...

... or perhaps the discussion should be a separate chapter.

In any case, you will probably need to include tabulated results. Table 5.1 illustrates the use of various LaTeX environments to include a computer printout (plain text file) in a document. The `verbatim` environment, which encloses the formatted text, is also useful for program listings.

Table 5.1: *Fraction of air volume involved in heat exchange for second mode (right column) vs. filling factor (left column). The plain-text headings represent f, m, μ_2 and f_2.*

f(%)	m	mu2	f2(%)
0.016	80.00	0.05400	4.874
0.031	56.57	0.07732	5.438
0.062	40.00	0.11103	6.125
0.125	28.28	0.16001	6.970
0.250	20.00	0.23175	8.020
0.500	14.14	0.33799	9.329
1.000	10.00	0.49789	10.967
2.000	7.07	0.74444	13.008
4.000	5.00	1.13919	15.525
8.000	3.54	1.81095	18.568
19.237	2.28	3.61958	23.174
37.180	1.64	7.28635	27.094
57.392	1.32	14.63631	29.813
74.316	1.16	29.35160	31.453
85.734	1.08	58.79364	32.360

Chapter 6

Conclusions

6.1 Summary and conclusions

6.2 Possible future work

Appendix A

Dummy appendix

Appendices are useful for supplying necessary details or explanations which do not seem to fit into the main text, perhaps because they are too long and would distract the reader from the central argument. Appendices are also used for program listings.

Notice that appendices are "numbered" with capital letters, not numerals. When the `\appendix` command in LaTeX [1, p. 175] is used with the `book` document class, it causes subsequent chapters to be treated as appendices.

Appendix B

Program listings

B.1 First program

Some initial explanatory notes may precede the listing.

B.2 Second program

B.3 Etc.

Appendix C

Companion disk

If you wish to make some computer files available to your examiners, you can list and describe the files here. The files can be supplied on a disk and inserted in a pocket fixed to the inside back cover.

The disk will not be needed if you can specify a URL from which the files can be downloaded.
